

# HEXIS - HEAT EXCHANGER INTEGRATED SERVICES

## AUTOMATED, INTEGRATED SERVICE

HEXIS is a fully automated and integrated system that combines industrial cleaning and non-destructive examination systems. HEXIS 2.0 can be performed on air coolers and bundles that are in-situ, further broadening the reach of its capabilities. Clean and inspect your heat exchanger tube bundles in a fraction of the time with HEXIS.

## CUSTOMIZE THE LANCE PROCESS

### TUBE CLEANING

A high-pressure water jetting pump allows interchangeability between 10K-40K psi. It consists of a cartridge style fluid end that can be converted in less than 30 minutes.

### TUBE DRYING

Tube drying applies compressed air back and forth down tube lengths to remove water and loose debris. This increases efficiency and improves data quality.

### VIDEO BORESCOPE

A remote visual inspection camera is sent down the tube bores to validate both cleaning and examination results. The videos can be viewed live or archived.

### NON-DESTRUCTIVE TESTING

Non-destructive testing utilizes proven electromagnetic techniques to examine the integrity of the exchanger tubes, allowing a variety of flaws and defects to be detected and measured.
